Luis Rodriguez, Frontend Developer

I am a Systems Engineering student and front-end developer with experience in creating modern, functional and intuitive web interfaces. I have skills in technologies such as React, Tailwind CSS, TypeScript and JavaScript, which I apply to develop efficient and visually attractive solutions.

Experience

Software Developer Intern | Invamer S.A.S.
Medellín, Colombia | Jan 2025 – Aug 2025

- Collaborated with the Solutions and IT Team in the development of the internal system "Central Empleados", designed for the Human Resources department to optimize employee management processes.
- Built dynamic UI components and modules such as Home, File Upload, Document Viewer, and Job Position Forms.
- Contributed to the backend development with Laravel (PHP), creating and integrating RESTful endpoints and CRUD operations.

Front-End Developer - Personal Projects
Freelance| January 2023 - Present

- Designed and developed a task application (TODO List) using **React**, **TypeScript** and **Vite**, implementing functionalities such as creating, editing, filtering and marking completed tasks.
- Developed and integrated my projects with local servers using tools like Vite and **Next.js**. In projects such as Crypto React and Weather Forecast I implemented technologies such as **Axios**, **Zod** and **Redux**, increasing the complexity of my developments.

Education

Systems Engineer, University ITM, Medellín
February 2023 – Present
